

Gamma Liquid Food

Suspensions

Gamma Suspensions are easily digestible liquid foods suitable for aquarium inhabitants. Blended, concentrated liquid food suspension for daily feeding of fish, corals and invertebrates.

- Gamma Suspensions are an ultra convenient way of getting all the benefits of our Gamma Frozen Foods, but without the need for a freezer.
- Ready to use - can be added directly to the tank [no mixing or defrosting required].
- Use as frequently as required, ensuring full consumption and no wastage.
- The liquid the feed is preserved in contains crustacean derivatives which also act as a coral food and feed trigger.
- Manufactured in the UK, in small, highly controlled batches using TMC's own special formulation.
- Use in conjunction with other Gamma Suspensions, Shots and Pellets as well as Gamma Frozen to provide a varied diet and maintain your fish in optimum condition.

Suspensions

Code	Product	Description	Volume (ml)
8364	Gamma Suspensions Natural Copepods	Concentrated liquid feed suspension that uses a blend of whole red plankton (Calanus sp.) and whole copepods in an amino acid rich liquid. Suitable for all aquarium inhabitants and Corals. Ideal for fish species such as dragonets, pipefish, seahorses and Mandarins.	200
